

# Homework F.1 - final project tech stack and MVP proposal

## Final Project Tech Stack

## MeetSync MVP Proposal

- The base functionality of the MVP includes two main features
  - The OAuth functionality that allows a user to sign in.
  - The generation of a QR Code/Link for the users to further join a team
- This code will be written in React.js and hosted on Netlify
  - Current site link : <https://meetsync.netlify.app/>
- The user information will be stored in Supabase (SQL)

If time permits we would also like Access Google calendar information from the team users' but this will be after we have implemented the MVP mentioned above.
